# 1. Introduction

The User Management System is a software application designed to manage user accounts and permissions within a system. It allows administrators to create, update, and delete user accounts.

This documentation provides a comprehensive guide on how to install, configure, and use the User Management System.

## 2. System Requirements

- Operating System: Windows 10 Pro or 11
- Web Server: Apache
- Programming Language: PHP
- Dependencies: SMTP Mail Server

## 3. Installation

**Steps 1:** Download Zip folder from GitHub link.

**Step 2:** Unzip Folder.

**Step 3:** Paste “Task” folder in your “xampp/htdocs” folder.

**Step 4:** Start Server.

**Step 5:** Create a database named “task” and import the database file.

**Step 5:** type “localhost/task/index.php” to use system.

**Note:** Use Your Own SMTP Server Id and password for sending mail.
